MRS. L. GIBSON

Superannuated Aug., 1958

ANNUAL REPORT

Mr. Chairman, Ladies and Gentlemen,

I herewith present the Annual Report on the health of the District for the year 1958.

The population on the Registrar General's estimate shows an increase of 1,280 over that of 1957.

The vital statistics follow very much the pattern of the previous year but the infantile mortality figure has risen by nearly 5 per 1,000 births. A breakdown of the infant deaths shows that 21 were due to prematurity and 16 to congenital defects, and a third major cause was respiratory disease.

There was one death recorded from the ordinary infectious diseases.

I again have to thank my colleagues who have helped in the compilation of this report and for the continued support and help of the Council.

I am,

Your obedient servant,

JOHN R. GRAHAM,

Medical Officer of Health

Health Offices,

Rural Council House,

Chesterfield.

SOCIAL CIRCUMSTANCES OF THE AREA

No new industries started in the district during the year.

There has been no continued unemployment although at certain periods of the year there have been temporary "lay offs" in certain industries

The new industries established two or three years ago are finding employment for quite a number of people and in some cases for those who are unable to cope with the physical effort required in some of the heavier industries.

APPROXIMATE POPULATION IN THE PARISHES

The Registrar General has given 94,200 as the estimated population of the Rural District, as against 92,920 for 1957.

The figure given for each parish is calculated according to the Registrar's figure and the number of inhabited dwellings in the parish.

WATER SUPPLIES

The Engineer and Manager of the North East Derbyshire Joint Water Committee reports the following works completed during 1958:—

18" and 9" diameter trunk mains in connection with the Ogston Reservoir Scheme

New trunk mains to improve the supply to North Wingfield and to Unstone Green.

Ogston Treatment Plant.

Throughout the year, mainlaying proceeded on various housing estates for the Constituent Authorities and for private development. Work continued on the embankment of the Ogston Reservoir and the Highway diversions.

During the year proposals were submitted to the Ministry of Housing and Local Government for their approval, for a scheme to improve the supply of water to the village of Barlow and also to afford a supply of treated water to Moorhall, Barlow.

There have been adequate supplies of water to all districts but the quality of the Barlow supplies have at times been very poor. As you will note from the last paragraph of the Engineer's report, this matter is in hand and it is to be hoped that approval of the scheme by the Ministry will soon be forthcoming.

SEWERAGE AND SEWAGE DISPOSAL

The Engineer has furnished the following information-

The new Northern Area Scheme referred to in some detail in the 1957 Report should be substantially complete by March, 1959, and the new works at Holbrook should by then be receiving the flows from Eckington, Mosborough and Holbrook. It is not intended to divert the flow from Killamarsh via the new Killamarsh Pumping Station until about November, 1959, when the new overflow manhole on the Killamarsh Flood Relief Scheme should be complete. Tenders have been approved by the Council for the new access road to serve the works and the Industrial Estate. A contract has been let for the caretaker's house, the laboratory, office and garage.

The Amber Valley Scheme was in operation by the end of the year with the exception of the Woolley Branch Sewer which has been delayed pending completion of the new Ogston Bridge. Schemes for alterations at Ashover Sewage Disposal Works and Kelstedge Sewage Disposal Works in connection with the Amber Valley Scheme have still to be prepared.

During the year the reconstruction of Wheeldon Mill Sewage Disposal Works was completed with the exception of minor items.

The new pumping plant and rising main at Allpits Wood Pumping Station came into operation during the year. The work was carried out by the Public Works Department and they hope to complete the painting of the machinery and pipework early in 1959.

Schemes have been prepared for :-

- 1. The enlargement of Holmesfield Sewage Disposal Works, with sewer extension and ejector station to serve the school and adjoining property.
- 2. A Flood Relief Scheme for Killamarsh.
- A sewer extension to take the trade waste from the Tar Distillery at Killamarsh.

It is hoped that these schemes will be carried out during 1959.

Schemes are in the course of preparation for :-

- 1. Wadshelf Sewerage and Sewage Disposal Scheme.
- 2. The second stage of the Beighton Sewage Disposal Works reconstruction.
- 3. The Eckington Flood Relief Scheme.

ATMOSPHERIC POLLUTION

The first part of the Clean Air Act, 1956, had been in operation during the previous year, but the complete Act only commenced to function from the 1st. July, 1958. It is thought that as the implications become fully operative, much improvement with regard to atmospheric pollution will be achieved.

CARBONISATION PLANTS There are three plants operating and producing large quantities of coke for domestic purposes. These plants do cause an amount of unavoidable nuisance and particularly fumes and smell. Practically all the processes are controlled by the Alkali Inspectorate, so that the powers of the Local Authority are very limited.

An acid recovery plant at one works has caused considerable inconvenience and anxiety. A new tall chimney of 120 ft. high has been erected and an electrostatic precipitation plant is being attached to the effluent. This plant ceased to function toward the end of the year but will operate about April next year, when the remedial work is completed.

COKE RESEARCH A new coke research station has been erected and commenced to operate in October. This is a complete carbonisation plant and research can be carried out on a full scale, which is something that has not been previously tried in this country.

BLAST FURNACES It was found that an amount of "crude" gas was being discharged to the atmosphere and a scheme for its collection and use is now being completed. This consists of a cleaning plant, water tube boiler and a chimney 120 feet high. This remedial work should improve the existing conditions which have been causing much inconvenience.

SLAG REDUCTION Adjoining the smelting works is a slag reduction plant which also causes nuisance from dust emission. A certain amount of remedial work has been carried out and further reconstruction has been promised in order to improve existing conditions.

INFECTIOUS DISEASES

The picture of the incidence of ordinary infectious disease shows only minor changes from the previous year.

Over all, there is a reduction again, no cases of diphtheria notified and no cases of enteric fever. Poliomyelitis, however, showed an increase of nine during the year.

TUBERCULOSIS

Notification of new cases dropped again during the year, both in pulmonary and non-pulmonary cases. Thirty-six new cases of pulmonary disease were notified compared with forty-eight the previous year and seven cases of non-pulmonary compared with eleven the previous year.

While one hesitates to be too optimistic regarding the incidence of infectious disease, tuberculosis at the present is no longer one of the major problems facing health departments in this area, as most of the cases notified respond readily to treatment with the new drugs.

N.B. In 17 Annual Reports of the treatment centre, this is the first occasion on which no case of scabies has been recorded.

NATIONAL ASSISTANCE ACT, 1948.

Ten years ago this Act came on the Statute Book and Section 47 with which, as a District Council Medical Officer of Health, I am concerned, became operative.

An interesting coincidence is that in these ten years the position of the aged in the population has undergone a radical change which came about so swiftly that the people concerned in the welfare of old folk had to face a problem of which there was little warning.

In the past the advances in clinical and social medicine had increased the expectation of life but very gradually. The usual picture of the termination of life in the elderly was a short phase of decline and a swift terminal illness, the latter frequently due to some infection.

With the advent of the antibiotics, the situation was changed almost completely overnight. Today, the general picture is that of a phase of decline with episodes of grave illness which yield to antibiotics but leave the person more feeble and liable to the chronic non-lethal disabilities of body and mind. This state has been referred to as the period of "medicated survival" but unfortunately, though the clinicians have enabled the person to survive, they have not yet been able to ensure that this period of survival prevents the patient descending to a state of health where he or she is a burden on the community and his or her family. This group referred to and those who are naturally becoming senile, are the particular province of those whose duty it is to administer Section 47 of the Act.

From the foregoing, it will be realised that the problem of the aged requiring attention is growing rapidly year by year. Clubs for the aged are doing good work in keeping the old folk interested, but frequently there comes a time when the only place that an aged person can be properly cared for is an institution.

The home help service, in many cases, can be called upon and postpone this time, but only too often the aged person becomes suspicious of the Help and makes accusations which lead to the Help (understandably) leaving the job, and frequently the mental state of the old person is such that constant supervision is necessary.

I have already stated that it is most difficult to decide when to put Section 47 of the Act into operation. It is my opinion that every case should be treated on its merits and personally, I always try to persuade people whom I think should be in an institution to accept a bed, even though it means visiting over a considerable period, even knowing that conditions are getting worse.

The following are the cases which came under observation this year for the first time.

Mr. and Mrs. A. aged 82 yrs. and 76 yrs.

The wife is a cripple and the husband did the housework but felt it getting too much for him. A home help in this case has temporarily, at least, filled the need.

Mr. and Mrs. B. aged 74 yrs. and 70 yrs.

This case was under observation for some time. When I first visited at the request of the family doctor, a neighbour had recently taken over and the house was clean and tidy, though the wife spent most of the time in bed. She was very confused mentally.

The husband was found dead in his chair, and as the wife would not consent to go away, and could not be left alone in the house, the Amendment Act was used and the patient removed to hospital. She is now quite content to remain in an institution and no further action was necessary.

Mrs. C. aged 92 yrs.

This case was visited at the request of the family doctor who described her as "sometimes with us, more often not and dirty always." The old lady was physically very fit for her age and had an enormous appetite. She ultimately agreed to go into Part III accommodation.

Mrs. D. aged 76 yrs.

This lady was visited because of neighbours' report of eccentric behaviour, and is a case which illustrates the difficulty of assessing a case on a first visit. The old lady was clean and tidy and her house likewise; her conversation and behaviour were quite normal. Later her eccentricities were such that she was visited by the Welfare Officer and was found to be mentally very confused and made no objection to going to an institution.

Mr. E. aged 83 yrs.

This man is still able to do his garden. He is very untidy in his person and is apt to use his fingers for eating instead of a knife and fork. His daughter keeps the house fairly clean. The case is still under observation.

Miss F. aged 72 yrs.

This lady was quite well physically, apart from malnutrition, but mentally very eccentric. The house was in an appalling condition of squalor. She was visited for about six months, and would promise on one visit that she would accept a bed in an institution, and refuse on the next. An order was sought and obtained and Miss F. removed to an institution. On admission (in late December), she was wearing only an old petticoat, overcoat and shoes. A search by the Welfare Officer revealed approximately £100 in small amounts in various parts of the house.

An investigation is at present being carried out by a member of the staff on the conditions of old age people in the district and the one salient fact which has been evident early in the inquiry is that generally speaking, old folk have little knowledge of the public services which are available to them. I hope to be able to present a fuller report on this most interesting problem in 1959.

PETROLEUM ACTS

Two new petroleum stores have been constructed and three have ceased to be used during the year, making the present total of 151 separate stores. These have a total capacity of 964,825 gallons.

There are three carbide of calcium stores with a licensed capacity of 2742 lbs.

The stores have been inspected and found to comply with the provisions of the Acts.

Licence fees amounted to £119/15/-d.

VERMINOUS PREMISES

The following are particulars of the number of houses disinfested during 1958.

	No. of houses disinfested for-			
	Bugs	Other pests		
Private houses	5	11		
Council houses	9	9		

PRIVY CONVERSIONS

During the year 31 pail and privy conversions were carried out.

CLOSET ACCOMMODATION

			No, in use at
			end of 1958.
Water closets			31,074
Other		 	1,532
Number of Cara- having water clo		 	149
Properties sharin closet accommod	g ation	 	99

PLACES OF ENTERTAINMENT

These are periodically visited to ensure reasonable cleanliness and proper maintenance of sanitary conveniences.

FOOD INSPECTION.

During the year, Food Premises have been kept under supervision by your Inspectors and, in consequence, the undermentioned quantities of foodstuffs were found to be unfit for human consumption. In all circumstances the food was surrendered to the Inspectors and it was removed from the premises and destroyed.

PREVENTION OF DAMAGE BY PESTS ACT, 1949.

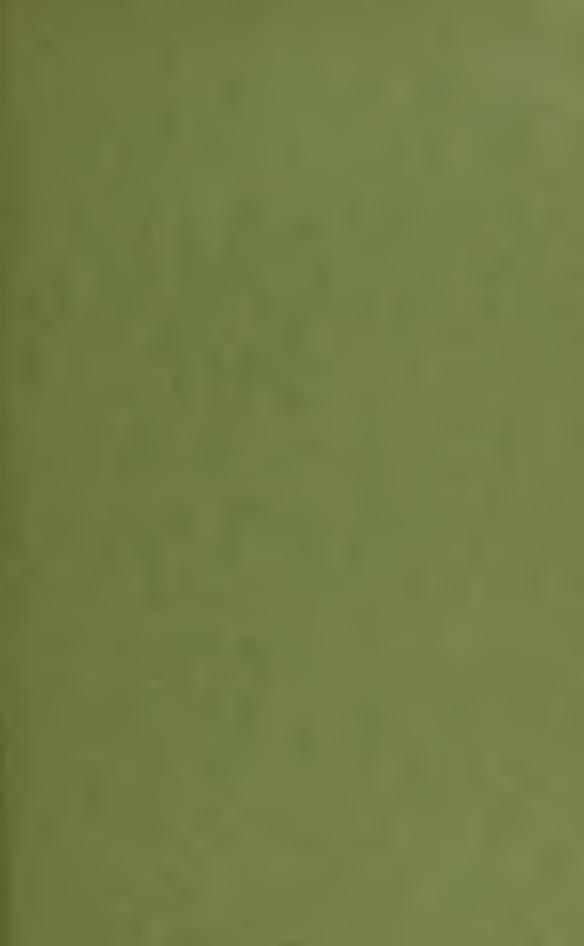

During the year 228 premises have been visited by your Inspectors and 200 surface infestations dealt with by the rat catchers to secure satisfactory elimination of rats and mice. Periodical visits continue to be made to certain business premises which are particularly susceptible to infestation and treatments are carried out when necessary. All the Council's sewage works and refuse tips are kept under observation and when infestations are found, appropriate action is taken.

The type of property and infestations dealt with are as follows:

		Type of Infestation						
Type of Property	Number of Treatments_	nts						
	carried	Major	Minor	Mice				
	00.	1713101	1111101					
Council Property	80	4	76	-				
Council Houses	35	-	25	10				
Private Houses (includes Sheffield Corporation)	45	_	32	13				
Other Property (includes Schools & Business)	40	_	22	18				
TOTAL	200	4	155	41				

All sewerage systems within the district have been test baited and all those found to be infested have received two treatments during the year. The operations during the year have resulted in an estimated kill of 1,200 rats from surface treatments. It is impracticable to give a reasonable estimate of the kill arising from sewer treatment.

A part-time rat catcher is employed who operates in accordance with the Ministry of Agriculture and Fisheries requirements.
